## **DETAILED ACTION**

### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 2-37, and 54, drawn to pulse position modulation using two transmitters wherein the data is encoded and part of the data is transmitted using each transmitter, classified in class 370, subclass 205.
- II. Claims 38-53 and 55-63, drawn to a single transmitter using frequency hopping to transmit data, classified in class 375, subclass 132.

The inventions are distinct, each from the other because of the following reasons:

Inventions group I and group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions can operate independently group I using two transmitters and encoding the data and group II using one transmitter and frequency hopping techniques.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2662

Because these inventions are distinct for the reasons given above and the search required for Group I. is not required for Group II., restriction for examination purposes as indicated is proper.
